Branch: B.Tech CSE core
Course Code: CSE0001

Introduction

This project is about digital literacy and how students can use digital tools properly. In todays world everything is online and students should know how to use internet safely. In this project I worked on different tasks like making infographic, creating profiles, solving coding problem, writing emails and learning about cybercrime. This project helped me in learning many new things.

Task 1 – Digital Literacy Infographic

In this task I created an infographic using Canva. It was my first time using Canva so at starting it was little confusing but later it became easy. I made a simple infographic about digital literacy, safe internet practices and email etiquette. I used a simple template and then edited its text.

While creating infographic the main problem which I faced was choosing the template as there were so many options available.the infographics shows digital literacy and its importance.

Task 2 – Digital Portfolio

In this task, I made and improved my metrics in GitHub, LinkedIn and Kaggle. These platforms serve students in various manners. Github serves as a repository for coding projects. LinkedIn is for professionals in networking and careern; Therefore, there can be a random job shower. Kaggle serves mostly for data science and study purposes.

I also created a GitHub profile README which displays some basic information about me. Hence, this will help me later in future to start with my builds. Then I also made linkedln and Kaggle profile which will help me in the future

Task 3 – Platforms

For practicing programming I used HackerRank and for the digital literacy quiz I created Google Form. Solved a problem called “Solve Me First” on HackerRank which was really

simple and made me learn how coding sites work. Also it gave me confidence to go and try more problems. Created a Google Form which was a digital literacy quiz of 5 Questions of multiple choice or short answers and linked it to Google Sheets to get responses. Learned how online tools can be used for collaboration and learning. Such tools are very useful in academics and projects.

Task 4 – Email Etiquette

I composed two formal emails as part of this assignment one asking for an extension of submission date and other asking for internship. This gave me the idea of how to write an email in proper format with subject, greeting and closing. When communication is not done properly, then problem occurs. A situation of poor communication is when a student sends a very casual or unclear mail to teacher. If subject is not mention or message is not mention properly, then decision of teacher may go wrong or he may not reply. There will be situation of problem. Proper and polite communication with clear message is very important. This task have helped me to communicate in a well manner.

Task 5 – Cybercrime Awareness

I this task I have leaned about phishing which is a type od cybercrime. It was suprising to see how easily people can be tricked by link and messages. Attackers try to create urgency so that people act quickly without thinking.

I also created a prevention checklist which includes safety tips like not sharing OTP and checking links before clicking. The one habit that can change be changes is that I will verify the message before taking any action . I will also be more careful while doing online transactions. This task was very useful and practical.

Conclusion

Overall this project helped me understand many important things related to digital literacy such as i learned about online safety, professional communication and useful platforms. Even though some tasks were new for me but I was able to complete them step by step. This project will help me in future in both academics and career.
